

## REMARKS

Claims 1-26 were examined and reported in the Office Action. Claims 1-26 are rejected. Claims 19-20 and 23-24 are amended. Claims 1-26 remain.

Applicant requests reconsideration of the application in view of the following remarks.

### I. Drawings

Applicant submits amended Figures 1 and 11 and has annotated the Figures as "replacement sheets." Approval is respectfully requested.

### II. 35 U.S.C. § 112, second paragraph

It is asserted in the Office Action that claims 19-26 are rejected under 35 U.S.C. § 112, second paragraph as being indefinite for failing to particularly point out and distinctly claim the subject matter regarded as the invention. Applicant has amended claims 19-20 and 23-24 to overcome the 35 U.S.C. § 112, second paragraph rejections.

Accordingly, withdrawal of the 35 U.S.C. § 112 rejections for claims 19-26 are respectfully requested.

### III. 35 U.S.C. § 103(a)

A. It is asserted in the Office Action that Claims 1-18 are rejected under 35 U.S.C. § 103(a), as being unpatentable over U. S. Patent No. 5,467,473 issued to Kahle ("Kahle") in view of U.S. Patent No. 5,987,595 issued to Yoaz ("Yoaz") and *On the value locality of store instructions*, Lepak, K.M, Lipasti, M.H., Computer Architecture, 2000, Proceedings of the International Symposium on June 10-14, 2000 ("Lipasti"). Applicant respectfully disagrees.

According to MPEP §2142 "[t]o establish a prima facie case of obviousness, three basic criteria must be met. First, there must be some suggestion or motivation, either in

the references themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or to combine reference teachings. Second, there must be a reasonable expectation of success. Finally, the prior art reference (or references when combined) must teach or suggest all the claim limitations. The teaching or suggestion to make the claimed combination and the reasonable expectation of success must both be found in the prior art, and not based on applicant's disclosure." (In re Vaeck, 947 F.2d 488, 20 USPQ2d 1438 (Fed. Cir. 1991)). Further, according to MPEP §2143.03, "[t]o establish prima facie obviousness of a claimed invention, all the claim limitations must be taught or suggested by the prior art. (In re Royka, 490 F.2d 981, 180 USPQ 580 (CCPA 1974). " *All words in a claim must be considered* in judging the patentability of that claim against the prior art." (In re Wilson, 424 F.2d 1382, 1385, 165 USPQ 494, 496 (CCPA 1970), emphasis added.)

Applicant's claim 1 contains the limitations of "[a]n apparatus comprising: a predictor having a collision history table (CHT), said predictor for predicting silent store instructions; a processing section coupled to the predictor, the processing section including an extended load buffer coupled to the predictor; a marking processing section; a comparing processing section; and a recovery processing section, wherein unexecuted load instructions are advanced over silent store instructions."

Applicant's claim 10 contains the limitations of "[a] system comprising: a processor having internal memory, a bus coupled to the processor; a memory coupled to a memory controller and the processor; wherein the processor includes: a predictor having a collision history table (CHT), said predictor for predicting silent store instructions; an extended load buffer coupled to the predictor; a marking process; a comparing process; and a recovery process, wherein unexecuted load instructions are advanced over store instructions."

Kahle discloses a comparison technique for reordering load and store instructions that were executed out of order. It is asserted in the Office Action that Kahle discloses "wherein unexecuted load instructions are advanced over silent store instructions. Column 2, lines 56-59...)." (Office Action, page 5, paragraph 14(a)(vi),

*emphasis added*). Upon reading column 2, lines 56-59, however, Kahle discloses that “[d]uring execution of the store instruction, the address is compared to the address of previously executed load instructions, in a load queue, which executed out of order ahead of the store.” Therefore, Kahle does not disclose “unexecuted load instructions are advanced over silent store instructions.” Moreover, nowhere in Kahle is a predictor for predicting silent stores disclosed, taught or suggested.

Applicant notes that Yoaz is the same inventor of the presently claimed Application. Yoaz discloses a load predictor for predicting where a load instruction will collide, and determining how far the load instruction can be advanced without leading to a collision. Yoaz also discloses a collision history table (CHT). Yoaz, however, does not teach, disclose or suggest a predictor for predicting silent stores.

It is asserted on page 6 of the Office Action, paragraph 14(c) that Lipasti discloses silent store prediction (referring to Lipasti, page 183, column 2, third paragraph). Lipasti, however, is not asserting a silent store predictor. Lipasti's section 2.0 refers to understanding of the value locality of store data values. The stride predictor that is referenced in the Office Action is used for the results listed in Table I, which are store value locality measurements for various benchmarks, and have nothing to do with silent store prediction. Lipasti does not teach, disclose or suggest silent store prediction. Just from reading Lipasti, one can not jump to the conclusion without impermissible hindsight that because the terms “silent store” and “stride predictor” are used within the same paragraph that Lipasti is teaching silent store prediction. Upon carefully reading paragraphs 2-3 on page 183, column 2 (Lipasti), clearly one can not learn anything relating to silent store prediction.

According to MPEP 2142, [t]o reach a proper determination under 35 U.S.C. 103, the examiner must step backward in time and into the shoes worn by the hypothetical ‘person of ordinary skill in the art’ when the invention was unknown and just before it was made. In view of all factual information, the examiner must then make a determination whether the claimed invention ‘as a whole’ would have been obvious at that time to that person. Knowledge of applicant’s disclosure must be put aside in

reaching this determination, yet kept in mind in order to determine the ‘differences,’ conduct the search and evaluate the ‘subject matter as a whole’ of the invention. The tendency to resort to ‘hindsight’ based upon applicant’s disclosure is often difficult to avoid due to the very nature of the examination process. However, impermissible hindsight must be avoided and the legal conclusion must be reached on the basis of the facts gleaned from the prior art.” Applicant submits that without first reviewing Applicant’s disclosure, no thought, whatsoever, would have been made to silent store prediction, as disclosed, in order to improve performance and power from, e.g., better memory disambiguation or reduced cache/memory traffic.

Since neither Kahle, Yoaz, Lipasti, nor the combination of the three, teach, disclose or suggest the limitations contained in Applicant’s claims 1 and 10, as listed above, a resulting combination would still not render Applicant’s claimed invention. And, since neither Kahle, Yoaz, Lipasti, nor the combination of the three, teach, disclose or suggest all the limitations of Applicant’s claims 1 and 10, as listed above, there would not be any motivation to arrive at Applicant’s claimed invention. Thus, Applicant’s claims 1 and 10 are not obvious over Kahle in view of Yoaz and further view of Lipasti since a *prima facie* case of obviousness has not been met under MPEP §2142. Additionally, the claims that directly or indirectly depend from claims 1 and 10, namely claims 2-9, and 11-18, respectively, would also not be obvious over Kahle in view of Yoaz and further in view of Lipasti for the same reason.

Accordingly, withdrawal of the 35 U.S.C. § 103(a) rejections for Claims 1-18 are respectfully requested.

B. It is asserted in the Office Action that Claims 19-26 are rejected under 35 U.S.C. § 103(a), as being unpatentable over Kahle in view of Lipasti. Applicant respectfully disagrees.

Applicant’s claim 19 contains the limitations of “[a] method comprising: fetching an instruction and determining if an instruction is one of a store and a load; performing a silent store prediction if the instruction is a store; executing the store instruction;

comparing an address and data of the store with load instructions in an extended load buffer; setting marking bits in the extended load buffer if a match is found in the comparing; updating a memory with the store instruction if the store instruction can be retired; and bypassing a predicted silent store instruction and executing a load instruction if the instruction is a load.”

Applicant’s claim 23 contains the limitations of “[a] program storage device readable by a machine comprising instructions that cause the machine to: fetch an operation and determining if the operation is one of a store and a load; perform a silent store prediction if the operation is a store; execute the store operation; compare an address and data of the store operation with load operations in an extended load buffer; set marking bits in the extended load buffer if a match is found in the compare instruction; update a memory with a store operation if the store operation can be retired; and bypass a predicted silent store operation and execute a load operation if the operation is a load.”

As asserted above in section III(A), neither Kahle nor Lipasti teach, disclose nor suggest silent store prediction as disclosed and claimed by Applicant.

Lipasti, does not teach, disclose or suggest a silent store predictor. Lipasti’s section 2.0 refers to understanding of the value locality of store data values. The stride predictor that is referenced in the Office Action is used for the results listed in Table I, which are store value locality measurements for various benchmarks, and have nothing to do with silent store prediction. Just from reading Lipasti, one can not jump to the conclusion without *impermissible hindsight* that because the terms “silent store” and “stride predictor” are used within the same paragraph that Lipasti is teaching silent store prediction. Upon carefully reading paragraphs 2-3 on page 183, column 2 (Lipasti), clearly one can not learn anything relating to silent store prediction.

Since neither Kahle, Lipasti, nor the combination of the two, teach, disclose or suggest the limitations contained in Applicant’s claims 19 and 23, as listed above, a resulting combination would still not render Applicant’s claimed invention. And, since

neither Kahle, Lipasti, nor the combination of the two, teach, disclose or suggest all the limitations of Applicant's claims 19 and 23, as listed above, there would not be any motivation to arrive at Applicant's claimed invention. Thus, Applicant's claims 19 and 23 are not obvious over Kahle in view of Lipasti since a *prima facie* case of obviousness has not been met under MPEP §2142. Additionally, the claims that directly or indirectly depend from claims 19 and 23, namely claims 20-22, and 23-26, respectively, would also not be obvious over Kahle in view of Lipasti for the same reason.

Accordingly, withdrawal of the 35 U.S.C. § 103(a) rejections for Claims 19-26 are respectfully requested.

**CONCLUSION**

In view of the foregoing, it is submitted that claims 1-26 patentably define the subject invention over the cited references of record, and are in condition for allowance and such action is earnestly solicited at the earliest possible date. If the Examiner believes a telephone conference would be useful in moving the case forward, he is encouraged to contact the undersigned at (310) 207-3800.

If necessary, the Commissioner is hereby authorized in this, concurrent and future replies, to charge payment or credit any overpayment to Deposit Account No. 02-2666 for any additional fees required under 37 C.F.R. §§1.16 or 1.17, particularly, extension of time fees.

Respectfully submitted,

BLAKELY, SOKOLOFF, TAYLOR, & ZAFMAN LLP
